

First Success for new Melinex® PETF Laser Engraveable Polyester Overlay Film

Luxembourg – November 13, 2007 – Newly launched Melinex® PETF Laser Engraveable Overlay (LEO) has been chosen for its first application – a government-backed, secure identity card scheme. The details of the scheme are confidential but DuPont Teijin Films, a leading supplier of durable, long-life polyester films used in the secure card market, today announced the first commercial order for its ground-breaking new product.

The new product is made from Melinex® PETF material - already established as a high quality substrate with many advantages over its competitors - including greater flexibility, chemical and temperature resistance. This transparent film is now available with the added capability of personalisation by laser engraving, providing the ideal choice to meet the demands for new generation identification documents.

“We have successfully provided the cards market with much-needed high performance Melinex® petf products that meet the tough demands for both security and durability. This latest film product complements our existing core body films and is a new addition to our overlay film range that already includes film for personalisation by dye diffusion thermal transfer” said Debbie Stephenson, Market Development Specialist.

“With this new laser engraveable overlay, we believe we now have a complete range to offer to the marketplace providing them with choice as well as durability,” says Jonathan Lloyd, European Marketing Manager. “We are delighted to receive our first commercial order from Asia Pacific for Melinex® LEO and feel it reflects the market pull for alternatives to current materials”
